

EASY. Access from any computer.
Also available on CD.

CONVENIENT. Train on your own time
at your own pace.

INTERACTIVE. 3-D simulations recreate
real-world use.

CONSISTENT. Standardized curriculum
gives all staff the same information.

IN-HOUSE. It's always there to train
new staff or provide a refresher course.

AVAILABLE NOW. Online or via CD – start
today. No waiting for an appointment.

FREE. Yes, free.

**An excellent training solution
for your busy practice.**

"Training this way clearly offers
some unique advantages. Studies
show that, while students retain
5% of what they hear in lectures
and 20% from audiovisual
presentations, retention rates
from e-learning can easily
reach 75 to 80%."

Jacques Devaud, CEO, eTrinsic
(Developer of the E-Trainer Program)

Easy PT/INR Training

An excellent way to monitor
oral anticoagulation therapy

Why 7 out of 10 Professionals are choosing INRatio®¹

Accuracy? Efficiency? Ease of Use?

Yes. Yes, and Yes!

Only INRatio2 has E-Trainer, an interactive training platform that's ready when you are.

E-Trainer is an electronic training simulation designed to provide on-site information for healthcare professionals and patients who use the INRatio2 system. E-Trainer is available online or as an easy to use CD-ROM.

This self-paced, interactive training tool allows users to learn and review the materials any time it's convenient. E-Trainer is an enhanced learning experience that engages individuals, taking them through product descriptions, monitor set-up, testing procedures and troubleshooting. Comprehension and learning is reinforced through assessments in each section, to ensure competency.

Welcome

Divided into an introduction and four brief modules, each section concludes with an assessment tool to gauge comprehension and retention of the materials.

Product Description

The first module of the program includes an overview of the testing operation along with a description of the monitor. This section also includes details about the test strip and the micro-capillary tube, a convenient accessory for easy blood collection and dispensing.

Setup Mode

This section details how to set-up the monitor for the first time or how to change menu settings in the future. Instructions include setting the date, time and the units in which the testing results will be displayed. The practice may also define its own "target" therapeutic range using the menu commands.

Performing the Test

Through a virtual demonstration, all aspects of the testing operation are addressed in this section. Steps include preparing for a test, preparing the fingerstick and applying the sample.

Troubleshooting

The troubleshooting module reviews potential operational, environmental and procedural error codes, including proper sample size, out of range QC and battery condition. This section also covers monitor cleaning and battery replacement.

Once the assessments at the end of each module have been successfully completed, a certificate of completion can be printed from the program to verify that training has been accomplished.

While the INRatio2 is a CLIA-waived test that is easy to operate, proper training is necessary to obtain quality results. E-Trainer makes it easy, efficient and cost-effective to maintain a high level of staff readiness for helping patients manage their anticoagulation therapy.
