Gastroccult®: Two Tests in One.

Gastroccult® is the only test designed specifically for gastric occult blood and pH testing. Gastroccult® has a convenient pH comparison chart on the test card. The pH scale provides the entire clinically relevant range for monitoring antacid prophylaxis.

With Gastroccult® you can be confident.

Gastroccult® is the only accurate way to detect blood in gastric specimens or vomitus. Fecal occult blood tests do not provide reliable results when used with gastric specimens. Gastroccult® can reliably verify low levels of blood in samples containing bile. No need to rely on a subjective visual inspection.

The Right Tool At The Right Time.

Whether your patients are in the ICU, CCU, NIC, Post-Op or the ER, they require the quality monitoring that Gastroccult® provides. Here is a partial list of critical medical conditions that can put a patient at risk for gastric bleeding and abnormal gastric pH levels:

- Hypotension
- Respiratory Failure
- Sepsis
- Multiple Trauma
- Cardiac Disease
- Liver Failure
- Burns
- Major Surgical Procedures
- Renal Failure

Now spend even less time testing gastric samples for occult blood and pH.

- Reliable results from both tests within one minute
- As easy to teach and learn as it is to use
- CLIA Waived

The Right Tool Gives You True Colors

Gastroccult® tests provide reliable results with DISTINCT color reactions. The intensity of the reaction on the Gastroccult® test is proportional to the amount of blood present in the specimen.

Examples A, B and C are positive Gastroccult® results for three different levels of gastric occult blood. Note the easy-to-interpret blue reactions that warn of the patient’s status.

A

Positive Results

Example A illustrates a trace amount of blood (50 µg/mL) present in this gastric sample, which may not be clinically relevant.

B

Example B illustrates a level of 150 µg/mL of blood which may be clinically important.

C

Example C indicates a level of 500 µg/mL of blood, a warning that the patient’s status may have changed.

D

Negative result

Example D is a negative result. (no blue is present)

Gastroccult® can verify the presence of blood in samples when a visual inspection would be subjective. Samples containing bile have a green discoloration making visual inspection even more difficult and unreliable. Gastroccult® can accurately detect blood in green samples and in samples with low levels of blood that appear colorless.

This gastric sample contains a significant amount of blood.

Gastroccult® has a convenient gastric pH test area that provides a distinct color reaction. The pH color comparison chart is located directly below the test area for easy interpretation, so you don’t need to worry about misplaced litmus paper or color comparison charts.
