QBC STAR™
Dry Hematology Analyzer

Fast, Simple CBC Analysis
Designed for the Point of Care
The QBC STAR hematology analyzer expands and advances the unique capabilities of previous generation STAR analyzers. While still retaining the fast and simple 3-step process for which the STAR is known, the 2013 STAR adds universal connectivity for easy interfacing to your LIS or directly to a PC, USB ports for simple peripheral connections and updated and improved electronics. It does all of this in a lighter and quieter package.
Features and Benefits:

Simple, Single Button Operation
At the push of a single button, the QBC STAR produces an accurate CBC with the 9 most-requested parameters, making it the most user-friendly hematology analyzer available today.

No Liquid Reagents
All of the QBC STAR’s stains and reagents are contained within a single tube that is easily filled from a simple finger stick, heel stick, or venous draw. It uses no liquid reagents, and requires minimal user cleaning and maintenance.

Rapid Startup and Results
Plug in the QBC STAR, and it is ready to provide results without user calibration. Complete sample processing and analysis takes just 7 minutes, offering results quickly for your patients.

Laboratory Information System Connectivity
Interfacing the QBC STAR to a Laboratory Information System is simple and easy through the Ethernet port provided as standard on every instrument allowing complete access to test results and electronic health records.

Flexibility for Your Point of Care
The QBC STAR’s dry hematology is used around the world in urgent care centers, pediatric offices, military bases and a variety of other settings. Visit our “Where It’s Used” section on our website to find out why the QBC STAR is the perfect fit for your lab.
The dry hematology approach of the QBC STAR is unique among hematology analyzers. Here’s how this patented technology delivers results:

**The Tubes**

The QBC STAR’s breakthrough technology begins with its unique blood collection tubes. These high-grade tubes are internally coated with all necessary stains and reagents and are easily filled with just 65µL of blood from finger sticks, heel sticks, or venous draws.

**Centrifugation**

The QBC STAR’s internal centrifuge rotates the sample at 11,000 RPM for approximately 5 minutes. Due to their varying densities, the different components of blood will separate into layers during this process, as seen in the illustration to the right.

*What is the float?* Due to its specific density, the precision float stretches out the platelet, lymphocyte and monocyte, and granulocyte layers to make these small layers more easily measurable. The precise specific density of the float also allows for the direct measurement of the hemoglobin concentration in the red blood cells.

**Simple Analysis**

The QBC STAR ease of use is unmatched among hematology analyzers.
The QBC STAR measures and reports a 9-parameter complete blood count with the ranges found below:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hematocrit (Hct)</td>
<td>15-65%</td>
</tr>
<tr>
<td>Hemoglobin (Hgb)</td>
<td>5-20 g/dL</td>
</tr>
<tr>
<td>Mean Corpuscular Hemoglobin Concentration (MCHC)</td>
<td>25-37.3 g/dL</td>
</tr>
<tr>
<td>White Blood Cell Count (WBC)</td>
<td>1.6-99.9 x 10^9/L</td>
</tr>
<tr>
<td>Granulocyte Count (Gran #)</td>
<td>0.8-70 x 10^9/L</td>
</tr>
<tr>
<td>Granulocyte % (Gran %)</td>
<td>1-99%</td>
</tr>
<tr>
<td>Lymphocyte and Monocyte Count (Lymph/Mono #)</td>
<td>0.8-99.9 x 10^4/L</td>
</tr>
<tr>
<td>Lymphocyte and Monocyte % (Lymph/Mono %)</td>
<td>1-99%</td>
</tr>
<tr>
<td>Platelet Count (Plt)</td>
<td>20-999 x 10^9/L</td>
</tr>
</tbody>
</table>

2. **Place Tube Into Analyzer**

3. **Press Start**
WHERE IT'S USED

The QBC STAR is the perfect hematology analyzer for a variety of point-of-care settings whose unique needs have traditionally not been met by wet analyzers:

**Urgent Care**
The QBC STAR provides fast results - critical in the urgent care setting – while remaining simple to operate and maintain, minimizing the burdens on lab staff and resources.

**Pediatrics**
Finger and heel stick samples make it easy to obtain samples from young patients, while the speed and ease of use of the QBC STAR make it easy to provide timely information for nervous parents.
At Sea
The U.S. Navy and major cruise lines have embraced the QBC STAR’s dry hematology for its low maintenance requirements and simple operation. Additionally, unlike short-lived liquid reagents, QBC hematology tubes are individually packed with a long shelf life ideal for voyages at sea.

Blood Banking
The QBC STAR is ideal for point-of-care testing, providing a hematocrit, hemoglobin, and platelet count as well as other commonly required CBC parameters. It does all of this in minutes through its easy-to-use dry hematology approach.

General Specifications

- Dimensions: W16” x D16.3” x H16.3”
- 40.6 cm x 41.4 cm x 41.4 cm
- Weight: 19 lbs. (8.6 kg)
- Noise: <70 db @ 3 ft
- Sample Volume: 70 µL
- Display: LCD Display
- Printout: 58 mm thermal recorder paper

Electrical Specifications

- Power Pack
  - Voltage Input: 90 - 264 VAC
  - Frequency: 50 - 60 Hz
  - Current Output: 5.21 A (Peak)
  - Power Output: 48 VDC

Connectivity

- USB: 3 external Ports
- Ethernet (Wired): RJ45

Operating Environment

- Non-Operating Temperature Requirements: -2 °F to 149 °F (-20 °C to 65 °C)
- Operating Temperature Requirements: 16 °C – 32 °C unrestricted (at > 32 °C use may be limited by instrument temperature shutdown or some results may be suppressed)
- Humidity: 10%-95% non-condensing

Ordering Information

- STAR Dry Hematology Analyzer: 429001
- STAR Tubes (Bag of 20): 429011
- STAR Tubes (Box of 100): 429625
- 1 Year Extended Service Agreement: 000012
