Collection and dispensing from a single plastic tube!

- Fill easily by capillary action to preset volume. No aspiration, air bubbles, or wasted samples.
- Dispense easily by pinching the unfilled portion of the tube. No bulbs, dispensers or other mechanical devices needed. Ideal for fingerstick sampling and dispensing.

MICROSAFE®
One-piece collection and dispensing
MICROSAFE® Tube

An air vent is strategically positioned on the sidewall of the tube to provide automatic air venting and sample volume control.

**Procedure:**

**CAUTION!** Filling is automatic: Never squeeze the tube while sampling.

**Step 1:** Hold the tube horizontally, and touch the tip of the Microsafe® Tube to the blood sample. Capillary action will automatically draw the sample to the fill line and stop.

**Step 2:** To expel the sample, align the tip of the tube with the sample target and squeeze the bulb. If a sample won’t expel, hold the tube vertically and slide a finger over the vent hole. Then align the tip with the sample target and squeeze the bulb.
